

Booked Is Not Sold. Signed Is.

The shared case record that carries every unit
booking to a signed Sale & Purchase Agreement.

Kabel DXP · Youth Innovation Sandbox

Pitch Video · 20 September 2026

All Data On Screen Is Simulated

THE PROBLEM

The Launch That Looked Like A Win.

A project launches. Sales books the first month's units, and the launch reads as a success. Over the following months a share of those bookings quietly falls apart — while the units sat off the market.

6–12_{wk}

One booking can hold a unit off the market

Challenge Brief

~64_{days}

Booking to SPA in the PJD Regency case

Federal Court, 2021 · Official

Day₀

Late-delivery damages run from the booking-fee date, not the SPA

PJD Regency v Tribunal, 2021 · Official

Sales fears slowing bookings. **Finance knows an unsigned booking is not cash.** Both are right.

WHERE THE BOOKINGS GO

What Leaks, And Why Nobody Sees It.

- **The Loan Falls Through**

The buyer's bank application is rejected — after the unit is already held.

- **The Buyer Walks Away**

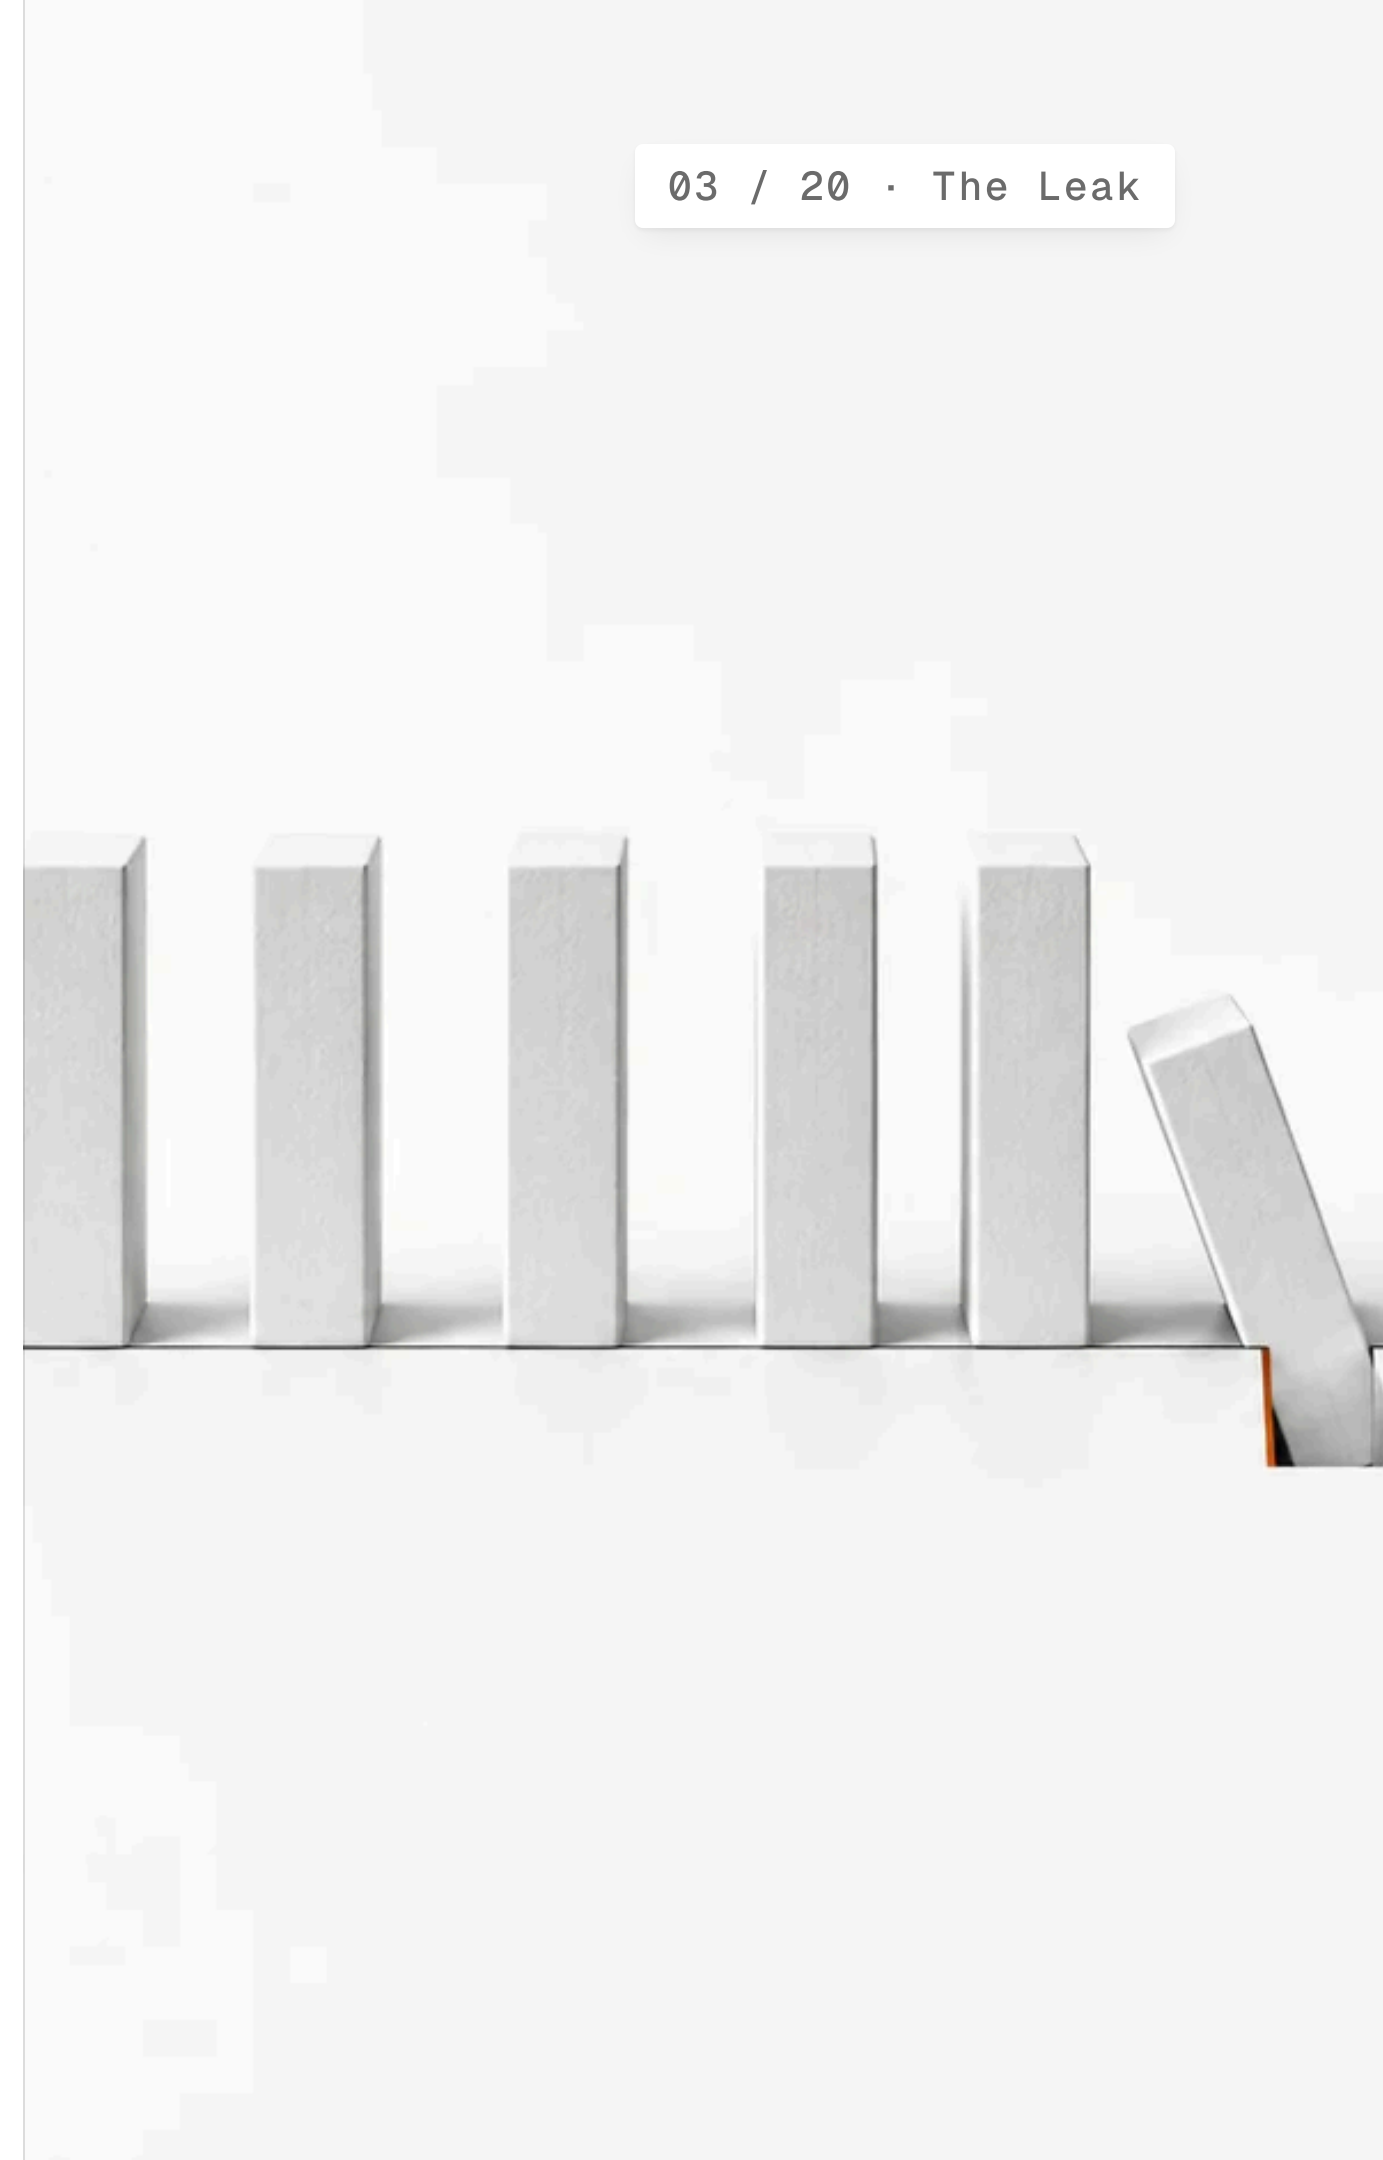

The mind changes; the file stays open and the unit stays locked.

- **The Paperwork Stalls**

A missing payslip sits unnoticed for weeks.

- **The File Goes Quiet**

The case sits with a panel banker and quietly dies.

ANONYMOUS PRACTITIONER SURVEY · 18 SEP 2026 · N = 5 · MIXED ROLES

What Practitioners Told Us.

5 / 5

Name loan rejection or insufficient financing the biggest cause of leakage

4 / 5

Say bookings stall at bank credit assessment

4 / 5

Want an earlier financing eligibility check above any other improvement

3 / 5

Estimate only 0–2 of every 10 bookings reach a signed SPA

3 / 5

Call document checking a safe job for AI — 1 of 5 would let AI score risk

3-2-1

Track bookings across a CRM, spreadsheets and email — no shared record

A convenience sample, self-reported. Used to **rank the causes** — not to set the rates.

MEET MORTAR

One Shared Case Record.

Every booking becomes one case page with a timestamped event log — **what happened, when we learned of it, who reported it, who verified it.**

Loan And Legal Run As Separate Tracks

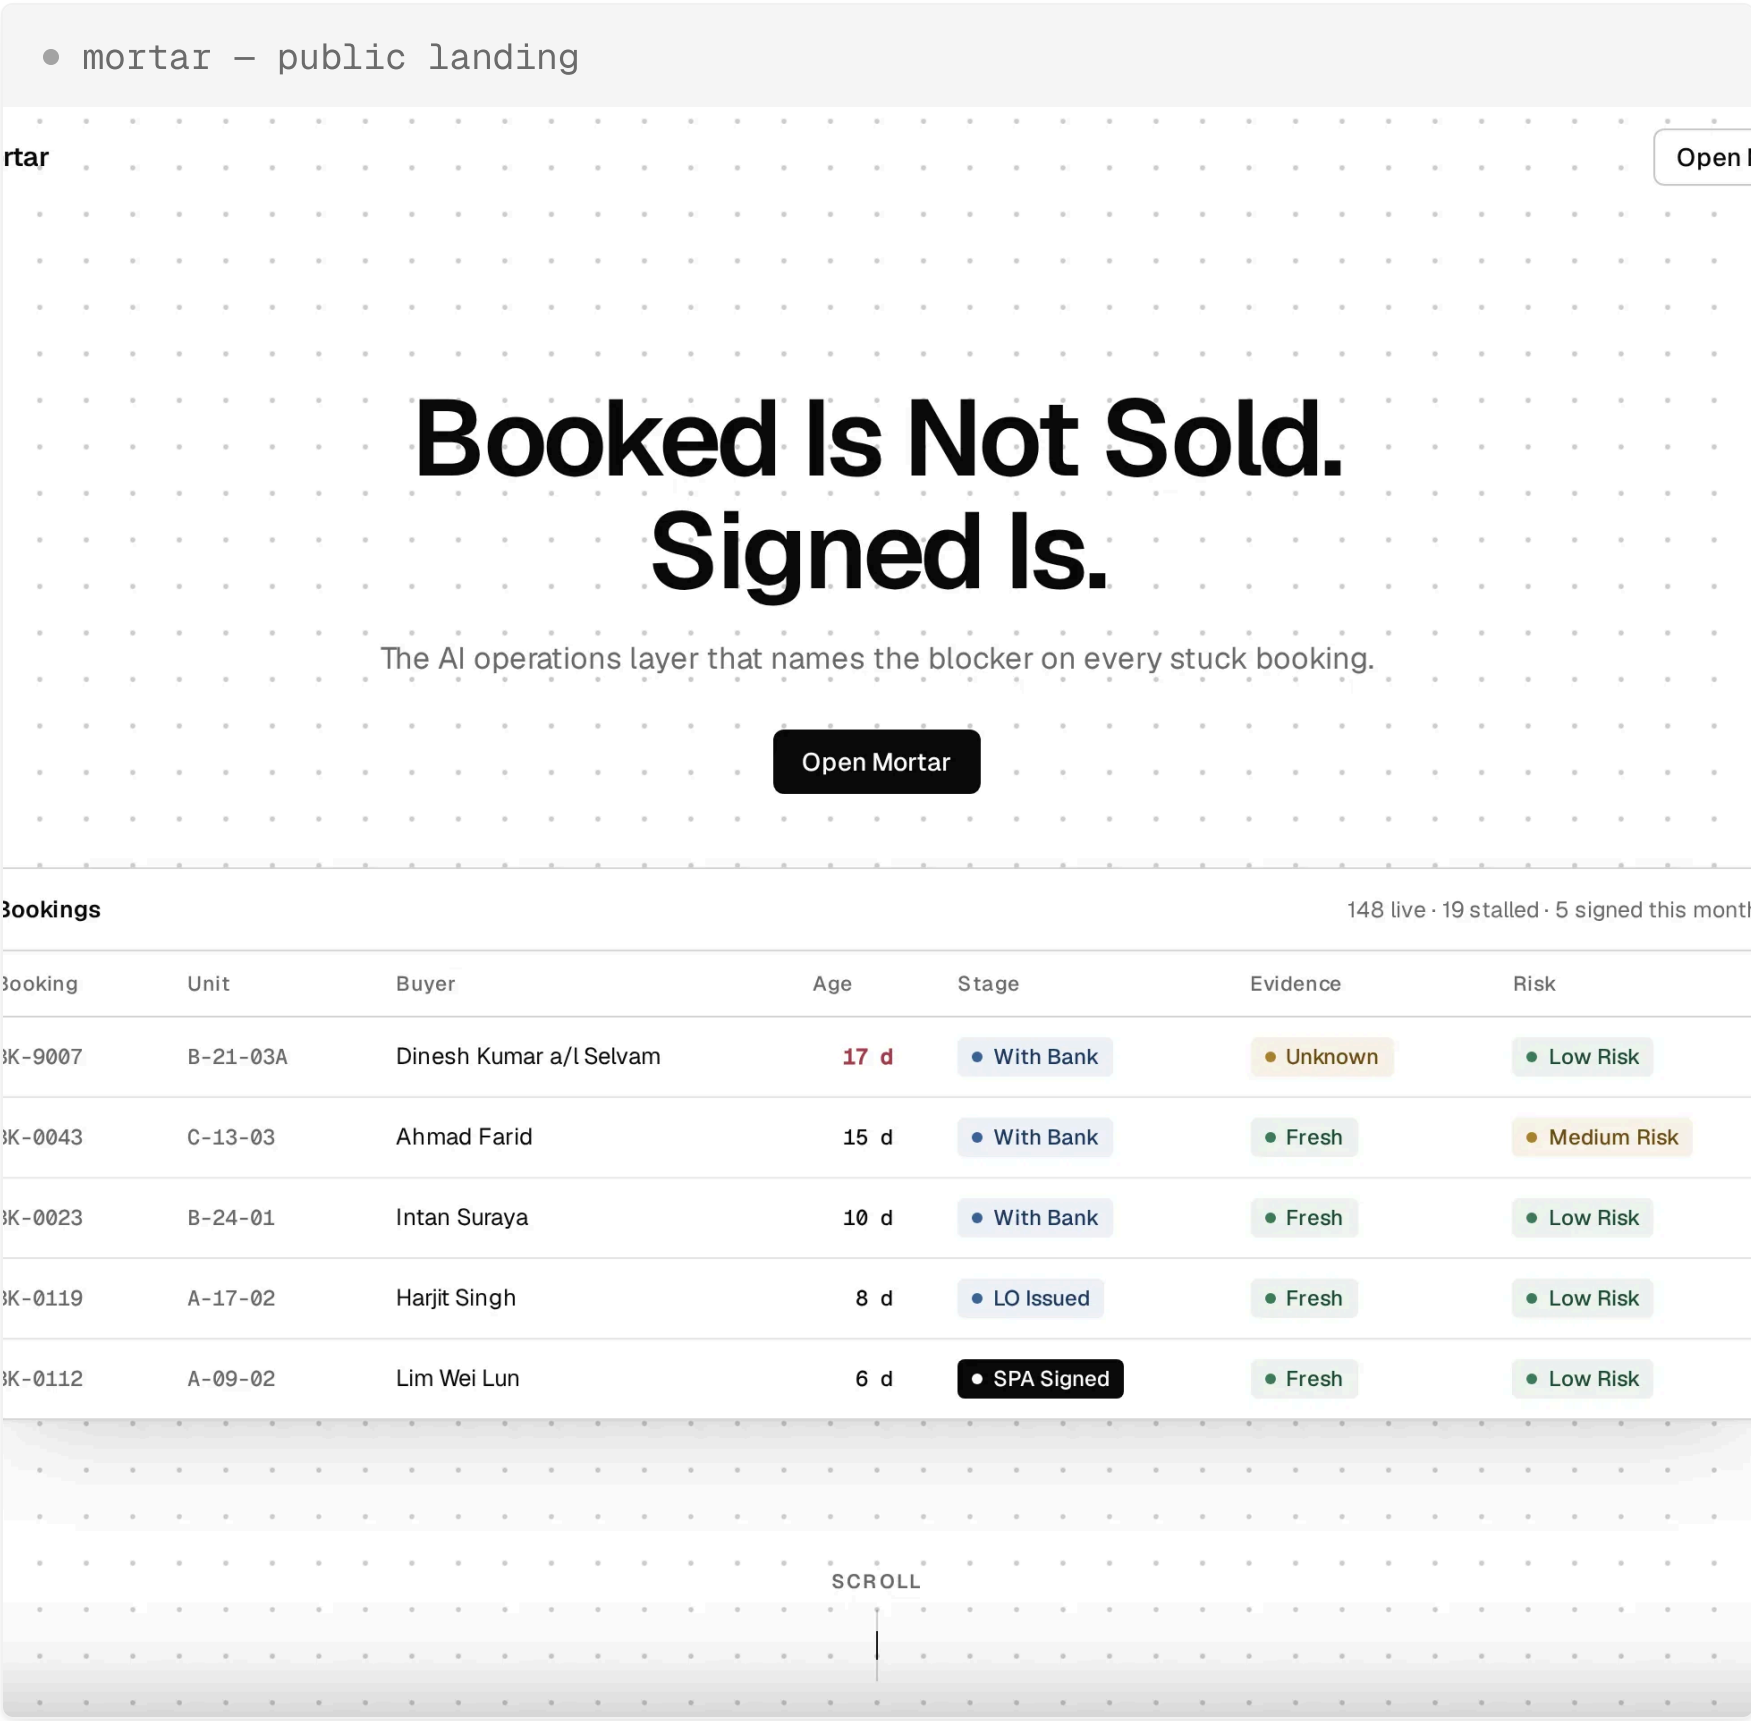

A slow bank does not freeze the solicitor's file.

Only Confirmed Events Move The Case

Unconfirmed, disputed or replaced updates stay visible but change nothing.

Silence Shows As Unknown

Ten quiet days reads as unknown — never as healthy pipeline.

WHO USES IT

Three Desks, One Book.

SALES ADMIN

Nurul Aina

`/chase`

Starts the day on the chase list — every stalled booking, its blocker in plain words, and a suggested next action. One click turns the suggestion into a task.

LOAN ADMIN

Tan Mei Ling

`/bookings`

Lives in the case ledger — verifies banker messages and document receipts, and watches applications across up to three banks per booking.

FINANCE

Arvind Raj

`/forecast`

Reads expected SPA signings with a range and the method behind them — not gross bookings counted at face value.

The same events, filtered for the job at hand — **nobody re-keys status into a second system.**

THE BOUNDARY

Where AI Helps, Where People Decide.

Jev — Typed Judgments, Never Prose

- Reads English, Malay, Chinese and Manglish messages into event, document and owner fields
- Suggests the next action and its urgency for a stalled case
- Ranks reviewed playbooks by fit to the live blocker
- Scores buyer responsiveness and hesitation from message gaps

One fan-out request per job · probability and confidence on every answer

People And Plain Math Decide

- A person confirms every milestone — unconfirmed evidence never moves a case
- Financing risk is deterministic rules, not a model
- The forecast is stage rates and intervals, not generated prediction
- Staff author and review every playbook
- Executives cancel bookings and release units

Jev proposes. People dispose.

The survey agrees — document checks **3 of 5**, next actions **2 of 5**, conversion risk **1 of 5**. So the forecast stays statistical.

THE FINANCE DESK

The Forecast: Signed SPAs, Not Bookings.

A Probability Per Live Booking

The share of resolved cases that reached the same stage and signed within 30 days, grouped by age.

Every Rate Shows Its n And Range

Sample size and a Wilson 95% interval beside each stage conversion.

A Sum, Not A Hope

Expected signings add the probabilities; the range is the 10–90 band of 2,000 draws.

Expected 21 · Range 17–25 · Live Bookings 50

Accuracy Score · Simulated

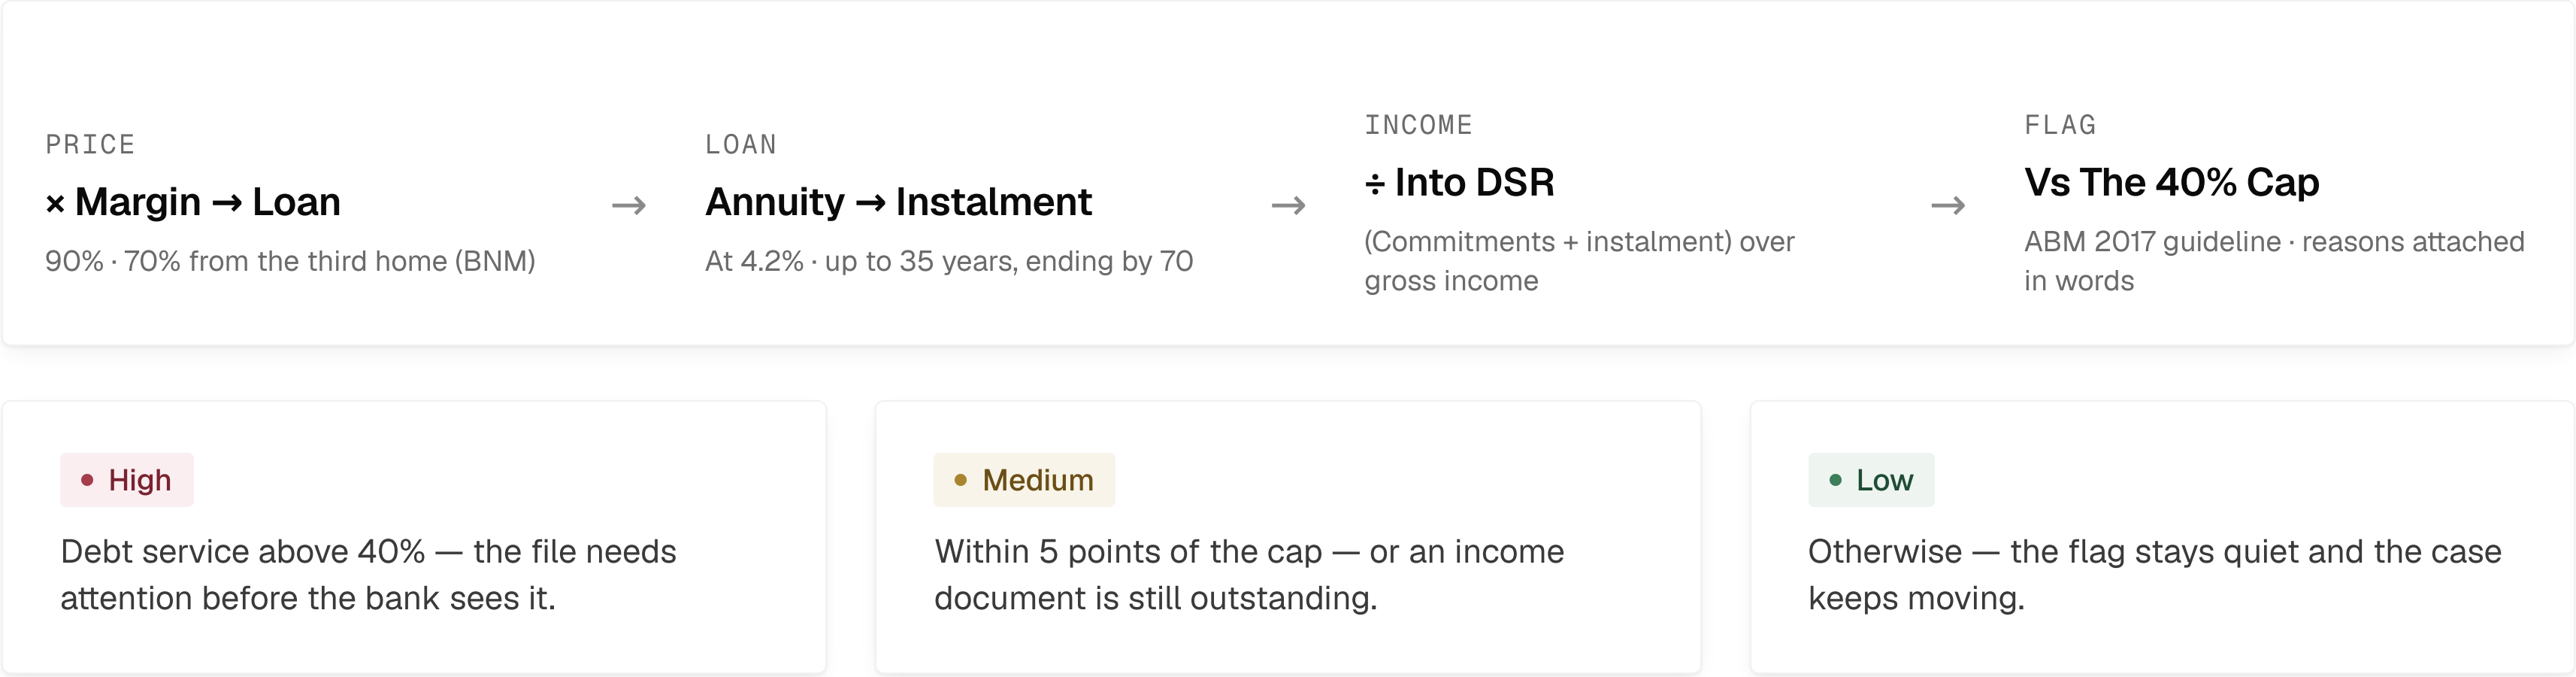

"An Accuracy Check On Simulated Data Proves The Method, Not The Business."

The caption the product itself shows

ADVISORY, NOT A GATE

The Financing Risk Flag.

Every practitioner ranked financing the top signal and **4 of 5 asked for an earlier check**. The flag prompts the follow-up — it never blocks a booking. (BK-9008: third home, 70% margin, high DSR.)

THE KNOWLEDGE LAYER

Playbooks: Staff Experience, Reviewed.

A Reviewed Record, Not A Wiki Page

Situation, action, limits, outcome — with an author, a reviewer and a status.

Ranked By Fit To The Live Blocker

Jev scores each candidate 0–2; for BK-9001, Missing Income Documents ranks first.

Found In The Words Staff Use

Malay and Manglish tags — "slip gaji" finds the payslip playbook.

Whether A TypeSafe A

THE MEASURE

The One Number We Are Judged By.

30-Day **Verified SPA** Rate

Bookings that sign a verified SPA within 30 days ÷ eligible bookings in the cohort.

Definitive

A signed SPA is an executed contract of sale — 10% falls due on signing.

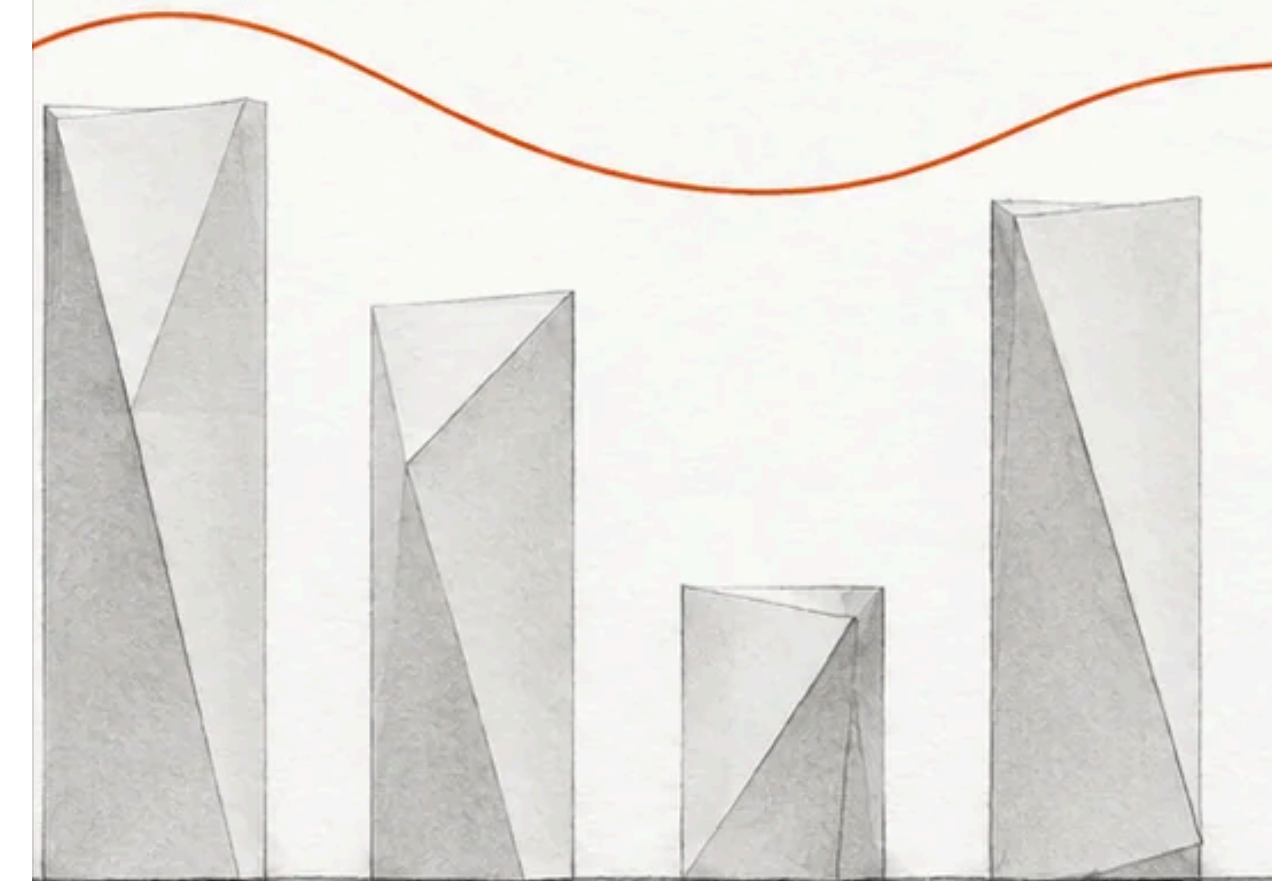

Readable In One Quarter

Enroll a cohort between day 15 and 44; observe by day 74; reconcile by 84.

Forces The Behaviour

Unblock early, or release the unit while the campaign still fits it.

If follow-up lifts 40 stalled bookings from 20% to 40%, that is **+8 signed SPAs** — a planning assumption to replace with pilot data. Never converted to cash.

A 12-Week Pilot.

WEEKS 1-2

Intake & Baseline

Existing booking exports, one project, one Sales Admin. Reconcile closed cases; capture the first playbooks.

WEEKS 3-4

Assisted Queue

The daily chase list with one administrator. Jev extraction where it removes a burden.

WEEKS 5-8

Live Cohort

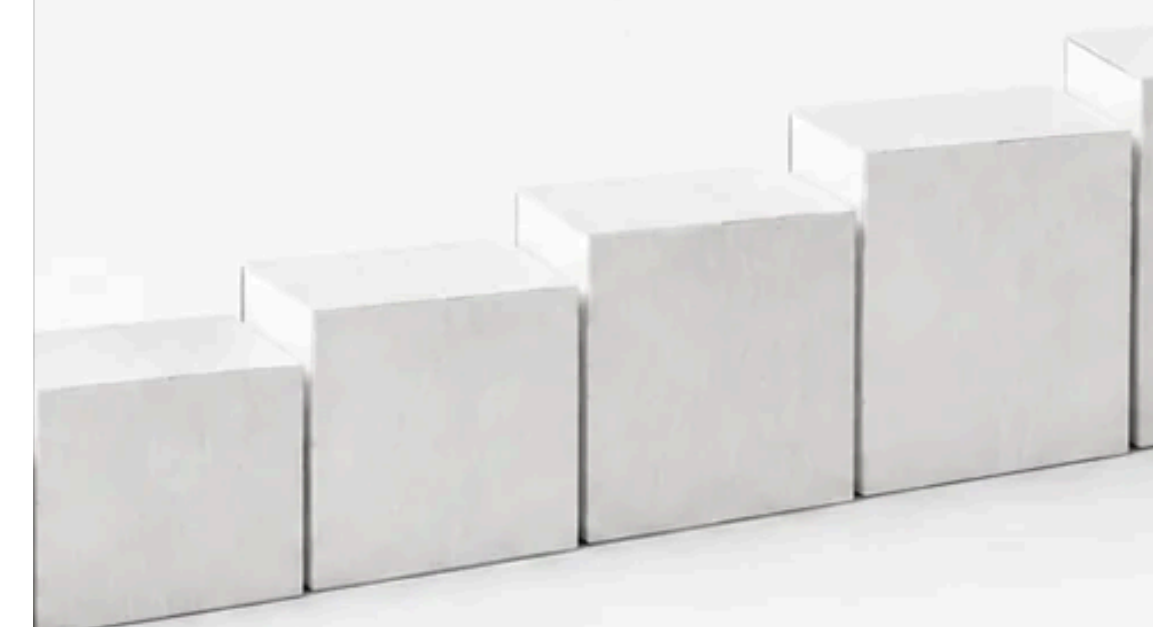

Bookings from day 15–44 get the assisted queue; a comparable group keeps ordinary follow-up.

WEEKS 9-12

Audit & Decide

Verified SPAs with Legal. Compare cohorts; count signed SPAs and inventory days released.

Inside the brief's rules: **no new CRM, no consultant, no vendor** — one project, existing channels, twelve weeks.

ROADMAP

What Comes After The Prototype.

Today — The Prototype

RATES	Seeded from public research and the survey
MESSAGES	Pasted by staff into the case
SEARCH	Keyword playbook lookup with local tags
DATA	Synthetic, seeded, one fixed date
SIGN-IN	A persona switch, no real accounts

Next — Production

CALIBRATE	Rates relearned on consented company records
INTAKE	WhatsApp Business Cloud, then OCR of scanned documents
INTEGRATE	ERP read-only first — a practitioner asked for IFCA by name
ACCESS	Single sign-on and role-based permissions
LATER	A knowledge graph only when the event log stops answering the questions

Still not: a generative chatbot

Still not: autonomous cancellation

Still not: a buyer-facing portal

Still not: signed SPAs read as cash

Booked Is Not Sold. Signed Is.

One case record. One chase list. One number — with a person confirming every step.
